

ANNOUNCING PITUITARY GRAND ROUNDS

An interactive educational program presented by Pituitary World News

Case-based state of the art review of clinical presentation, diagnostic considerations and treatment.

Pituitary Grand Rounds is a novel exciting and interactive educational program developed and produced by Pituitary World News. Set in the style of classical “grand rounds” once routinely held at educational institutions, each episode of this program will feature a compelling patient and a physician who will discuss the patient’s disease state.

The **Pituitary Grand Rounds** discussions review the patient’s clinical presentation and course then evolve into a case-based state-of-the-art review of relevant applicable diagnostic considerations and treatments. The aim of this series is to cover all aspects of pituitary disorders. As every patient is unique, disease states may occasionally be repeated to include particularly illustrative case histories.

Participation by patients is voluntary. There will be no incentives, and all participants must consent to discuss and record their cases in advance. Patients can place limits on restricted subject matters that are not up for discussion during the grand rounds’ presentations.

Pituitary Grand Rounds episodes are professionally videotaped and shared extensively on Pituitary World

News, social and mainstream media, through its exclusive video channels including YouTube and Vimeo.

Conferences and symposium opportunities: In addition to the video presentations, our grand rounds program is well-suited for one or two hour-long industry-sponsored symposiums or dinner programs at national and local/regional meetings such as the American Association of Clinical Endocrinologists, The Endocrine Society, and others.
